

# Distributed Algorithms 2023

Graph-theoretic foundations

# **Graphs in this course**

- Defining:
  - models of distributed computing
  - what we want to solve
  - what are the assumptions
- Designing & analyzing algorithms
- Proving impossibility results
- Often: graph ≈ network, node ≈ computer

• Graph where maximal independent sets are never minimum dominating sets?

# Please do not confuse

#### Maximal

- not a subset of another solution
- very easy to find: add greedily

#### • Maximum

- largest possible solution
- often hard to find

# Please do not confuse

#### • Minimal

- not a superset of another solution
- very easy to find: remove greedily

#### • Minimum

- smallest possible solution
- often hard to find

### Minimum vertex cover

# Minimum dominating set

### Maximum independent set

Smallest set of nodes that is both an independent set and a dominating set

# Maximum matching

# Minimum edge cover

### Minimum edge dominating set
